

Welcome to today's lecture on Data Analysis. As you can see on Slide 1, we have our agenda for this presentation. Now let's move forward and discuss the key concepts on slide 2. We will cover the main features of the software and its best practices. Next, I'd like to highlight some important questions on Slide. How do we handle outliers? What are the common pitfalls? Which statistical methods are most robust? Finally, thanks for following along. In conclusion, slide 4 will summarize everything we've discussed.
